Here are a [few tips](#) to help create a Twitter promotion plan. Plus, [learn](#) from today's top Twitter-using brands.

Mobile Load Time Slow Fast

Try to load your website on a mobile device and measure the download time. If your website takes more than five seconds to download on a mobile device, you will lose **74 percent of your audience!** Mobile usage is growing fast, especially in North America, where it will soon outpace desktop browsing usage. [Make sure your site loads fast](#) and that it looks nice on all types of mobile devices. Be sure to not use Flash, and keep photos and videos to a minimum. Here are [two useful tips from Google™](#) for optimizing your mobile site speed.

Mobile Optimization Your website needs further mobile optimization

- | | |
|--------------------|---------------|
| Mobile Redirection | Mobile CSS |
| Meta Viewport Tag | Flash content |
| Apple Icon | |

Make sure that your [website is prepared](#) for mobile browsing.
These are the different aspects that can be optimized for mobile users:

- [Mobile CSS](#)
- [Meta Viewport Tag](#)
- [Apple Icon](#)
- [Mobile Redirection](#)
- [No Flash content](#)

 **WWW Resolve** Be careful. Your website without www doesn't redirect to www (or the opposite). It is duplicate content!
⊙⊙⊙ ***

Be sure that www.jackshainman.com and jackshainman.com are not running in parallel.
 Redirecting requests from a non-preferred hostname is important because search engines consider URLs with and without "www" as two different websites.
 Once your preferred domain is set, use a [301 redirect](#) for all traffic to your non-preferred domain.

 **URL Rewrite** Good, your URLs look clean. Make them even more user-friendly by removing useless extensions.
⊙⊙⊙ ***

Great! You have [clean \(user-friendly\) URLs](#) which do not contain query strings.
 Clean URLs are not only [SEO-friendly](#) but are also important for usability.

 **IP Canonicalization** No
⊙⊙⊙ ***

Be careful, your server IP is not forwarding to your website's domain name. Search engines like Google™ are now able to index your website with its IP instead of its domain name. This will result in duplicate content.
 To check this for your website, enter your IP address in the browser and see if your site loads with the IP address. Ideally, the IP should redirect to your website's URL or to a page from your website hosting provider.
 If it does not redirect, you should do an [htaccess 301 redirect](#) to make sure the IP does not get indexed.

 **robots.txt** <http://www.jackshainman.com/robots.txt>
⊙⊙⊙ ***

Great, your website has a [robots.txt](#) file.
 A [robots.txt](#) file allows you to restrict the access of search engine robots that crawl the web and it can prevent these robots from accessing specific directories and pages. It also specifies where the XML sitemap file is located.
[Click here](#) to check your robots.txt file for syntax errors.

 **XML Sitemap** Missing
⊙⊙⊙ ***

Your website does not have an [XML sitemap](#) - this can be problematic.
 A sitemap lists URLs that are available for crawling and can include additional information like your site's latest updates, frequency of changes and importance of the URLs. This allows search engines to crawl the site more intelligently.
 We recommend that you [generate](#) an XML sitemap for your website and submit it to both [Google™ Webmaster Tools](#) and [Bing Webmaster Tools](#). It is also good practice to specify your [sitemap's location](#) in your robots.txt file.

✔ Underscores in the URLs No

🔍 🔍 🔍 ***

Great, you are not using underscores (these_are_underscores) in your URLs. While Google™ treats hyphens (these-are-hyphens) as word separators, it does not treat underscores as word separators.

Title JACK SHAINMAN GALLERY
Length: 21 character(s)

Great, your [title](#) contains between 10 and 70 characters.
 Make sure your title is explicit and contains your [most important keywords](#).
 Be sure that each page has a unique title.

Description JACK SHAINMAN GALLERY
Length: 21 character(s)

Ideally, your [meta description](#) should contain between 70 and 160 characters (spaces included).
[Meta descriptions](#) allow you to influence how your web pages are described and displayed in search results. A good description acts as a potential organic advertisement and encourages the viewer to click through to your site.
 Ensure that your meta description is explicit and contains your [most important keywords](#). Also, each page should have a unique meta description relevant to the content of that page.

Meta Keywords JACK SHAINMAN GALLERY, Jack Shainman, Claude Simard, Tamsen Greene, El Anatsui, Shimon Attie, Radcliffe Bailey, John Bankston, Tim Bavington, Yoan Capote, Nick Cave, Geoffrey Chadsey, Gordon Cheung, Elizabeth Crawford, Pierre Dorion, Till Freiwald, Jean-Pierre Gauthier, Pascal Grandmaison, Kay Hassan, Todd Hebert, Barkley L. Hendricks, Nir Hod, Prudencio Irazabal, Anton Kannemeyer, Bharti Kher, Bob Knox, Deborah Luster, Kerry James Marshall, Richard Mosse, Zwelethu Mthethwa
Length: 478 character(s)

[Meta keywords](#) are used to indicate keywords that are relevant to your website's content. Because search engine spammers have abused this tag, however, it provides [little to no benefit](#) to your search rankings.
 You can safely avoid the use of this tag for new web pages. For existing web pages, make sure the meta keywords do not appear to be spammy.

Headings Missing

Your website does not use [HTML headings](#) (<H1> to <H6>) or it has far too many HTML headings.
 Use your keywords in the headings and make sure the first level (<H1>) includes your most important keywords.
 For more effective [SEO](#), use only one <H1> tag per page.

Images We found **1** images on this web page.
 No alt attributes are empty or missing.

Good, most or all of your images have alternative text (the [alt attribute](#)).
[Alternative text](#) describes your images so they can appear in [Google™ Images](#) search results.

✔ Flash No

⊙⊙⊙ ***

Good, no Flash content has been detected on this page.

Flash should only be used for specific enhancements. Although Flash content often looks nicer, it cannot be properly indexed by search engines. Avoid full Flash websites to maximize SEO.

This advice also applies to AJAX.

✔ Frames No

⊙⊙⊙ ***

Great, there are no frames detected on this page.

Frames can cause problems on your web page because search engines will not crawl or index the content within them.

Avoid frames whenever possible and use a NoFrames tag if you must use them.

Indexed Pages

○○○ ***

This is the number of pages on your website that are indexed by Google™.

The more pages that search engines index, the better, as this offers more opportunity for your website to be found.

A low number (relative to the total number of pages/URLs on your website) probably indicates that your internal link architecture needs improvement and is preventing search engines from crawling all of the pages on your website. You might want to create/check your site's XML sitemap and submit it to Google™. You must also build backlinks to your site's inside pages to help Google™ bots crawl and index your web pages.

Check Google™ Webmaster Tools under Health and Index Status, to keep track of the status of your site's indexed pages.
